

Georges Garden Shop

We have a fictitious client who wants to have a gardening shop. He will need the following:

- 4 web pages
- The landing page will need to have a carousel
- The website is to be responsive with Mobile first design
- He needs a contact form. This form will need to have some indication of what the client is interested in. A list of items will be provided by the client.
- Two videos from YouTube (copyright and use is assumed). If you don't have access to two videos for this exercise, I can provide you with them.
- A gallery of 20 products promoting the different parts of the Gardening Shop. I would suggest you "borrow" these from the internet for this exercise (please take note of where you found the images, in case we need to ask permission to use these images in the future – copyright issues). A list will be provided by the client.
- Colours and layout will be up to you. There will need to be a green garden feel to the theme.

The use of a Logo and images is up to you. For this exercise, I would suggest you have a look at other gardening websites and "borrow" any content you need.

The idea of this exercise is to use **Foundation** for both the **prototyping** and development of a **simple website**. For this exercise, you can use just the CSS, or you can use the SCSS, if you wish. This is a FOUNDATION exercise.

You will need to create a working wireframe (Prototype) so that you can demonstrate the functionality, type of content and overall layout of the website. This could also be your working storyboard.

The garden shop sells the following items:

- Plants – fragrant, fruits, herbs, ground covers, natives, indoor, hedges, potted, roses and bulbs
- Pots
- Gifts
- Garden tools
- Fertilisers
